Welcome to Medication Delivery Solutions (MDS)

BD is among the world's leading suppliers of medical devices and a leading innovator in medication management devices – from preparation to injection and infusion. In 1906 the Company built the first-ever facility in the U.S. to manufacture needles and syringes. In recent years - particularly given our merger with CareFusion in 2015 and Bard in 2017 - the complementary nature of BD, CareFusion and Bard capabilities make the new, combined company stronger and more relevant than ever before in medication management.

Our History

With more than 118 years of history, BD has built a strong culture of innovation that has strengthened its leadership and partnerships with healthcare facilities. A pioneer in healthcare worker safety, BD offers products featuring safety technologies to protect healthcare workers from needlestick injuries and exposure to hazardous drugs. An expert in vascular access management and care BD provides a complete and evidence-based set of solutions from catheter insertion to removal, and everything in between. To answer the needs of patients and healthcare workers BD also provides healthcare industries with the right products and solutions.

We believe in quality

Because you can only partner with reliable suppliers, BD has a commitment to high quality products and processes. BD has a global quality policy valid for all our manufacturing sites, design centres, legal manufacturers and sales offices. All our manufacturing sites, distribution centres, design centres and legal manufacturers are certified according to ISO 13485. Our products are designed, developed and manufactured according to worldwide standards, guidelines and legislation. Within BD we have common computerised systems for core quality processes such as document control, labelling, change control, comply surveillance, CAPA and audits. Our different product categories comply with the standard applicable to them, ISO 10555, ISO 6009, ISO 7886, and are always mentioned in the declaration of conformity of the products. The labelling complies with EN980, EN1041 and ISO 15223. The packaging of the products is developed and maintained according to ISO 11607. The design, development and manufacturing apply the risk management activities per ISO 14971 and we perform biocompatibility testing of raw material and final product in accordance with ISO 10993. Customer-oriented BD has Quality and Regulatory departments to provide the mandatory support and communication.

Global reliability

With a global presence in more than 190 countries, BD is a reliable supplier making supply chain excellence a priority to reach delivery expectations from our customers. Our state-of-the-art plants are manufacturing thousands of different high quality products around the world.

Sustainability

Environmental sustainability is also a key initiative with actions intended to minimise the environmental footprint in our manufacturing. BDs environmental initiatives include the reduction of energy and water consumption, as well as hazardous and non-hazardous waste generation, and an increase renewable energy use.

BD has one single and relentless purpose: Advancing the world of health. This is how we make a difference, this is our work and this is our passion.

Infection Prevention

BD ChloraPrep™

- Cutaneous solution licensed for disinfection of the skin prior to invasive medical procedures
- Sterile antiseptic solution containing a combination of 2% Chlorhexidine gluconate in 70% Isopropyl alcohol
- Clear or Tinted (Orange) - In the tinted solution, sterile dye E110 (Sunset Yellow) is introduced upon activation
- Different sized applicators for different procedures, both surgical and vascular
- Flow control helps prevent pooling and promotes even distribution
- Manufactured sterile - both the solution and applicator are sterile
- Single use applicators designed to facilitate proven back and forth application technique, whilst maintaining user asepsis (ANTT®)
- Sterile sponge, designed for comfort, with minimal dermal abrasion

Prescribing Information: ChloroPrep™ & ChloroPrep with Tint 2% chlorhexidine gluconate w/v / 70% isopropyl alcohol v/v cutaneous solution. Refer to the Summary of Product Characteristics before prescribing. **Presentation:** ChloroPrep – each applicator contains 0.67ml, 1ml, 1.5ml, 3ml, 10.5ml or 26ml of 20 mg/ml chlorhexidine & 0.70 ml/ml isopropyl alcohol; ChloroPrep with Tint – each applicator contains 3ml, 10.5ml or 26ml of 20 mg/ml chlorhexidine & 0.70 ml/ml isopropyl alcohol. **Indication:** Disinfection of skin prior to invasive medical procedures. **Dosage & administration:** Applicator volume dependent on invasive procedure being undertaken. May be used for all age groups and patient populations. Use with care in newborn babies and those born prematurely. Applicator squeezed to break ampoule and release antiseptic solution onto sponge. Solution applied by gently pressing sponge against skin and moving back and forth for 30 seconds. The area covered should be allowed to air dry. **Contra-indications:** Patients with known hypersensitivity to ChloroPrep or ChloroPrep with Tint or any of its components, especially those with a history of possible Chlorhexidine-related allergic reactions. **Warnings and precautions:** Solution is flammable. Do not use electrocautery procedures or other ignition sources until dry. Remove any soaked materials before proceeding with the intervention. Do not use in excessive quantities, allow to pool in patient skin folds or drip on materials in contact with patient skin. Ensure no excess product is present prior to application of occlusive dressing. For external use only on intact skin, do not use on open skin wounds or broken or damaged skin. Over-vigorous use on fragile or sensitive skin or repeated use may lead to local skin reactions. Avoid prolonged skin contact. Avoid contact with eyes, mucous membranes, middle ear and neural tissue. Chlorhexidine may induce hypersensitivity, including generalised allergic reactions and anaphylactic shock. Chlorhexidine-containing products are known causes of anaphylactic reactions during anaesthesia. The symptoms of anaphylactic reactions might be masked in an anesthetized patient. If symptoms of an anaphylactic reaction are detected during anaesthesia, chlorhexidine related allergic reaction should be considered. When chlorhexidine-related allergic reaction during anaesthesia is suspected, other products containing chlorhexidine used during anaesthesia (e.g. IV lines) should be removed. Special precaution should be taken to avoid patient exposure to any other product containing chlorhexidine during the course of the treatment. May cause chemical burns in neonates, with a higher risk in preterm infants and within the first 2 weeks of life. **Pregnancy & lactation:** Although no studies have been conducted, no

effects are anticipated as systemic exposure is negligible. **Undesirable effects:** Very rare; allergic or irritation skin reactions to chlorhexidine, isopropyl alcohol or sunset yellow (E110, present in ChloroPrep with Tint only), including erythema, rash, pruritus and blisters or application site vesicles, other local symptoms have included skin burning sensation, pain and inflammation. Frequency not known; hypersensitivity including anaphylactic shock, dermatitis, eczema, urticaria, chemical burns in neonates, eyes irritation, hyperaemia, impaired vision, chemical burn and eye injury. Discontinue use at the first sign of local skin reaction. Cases of anaphylactic reactions have been reported during anaesthesia. Description of selected adverse reactions: There have been isolated spontaneous reports of generalised allergic reactions potentially associated with ChloroPrep solution and have been reported during anaesthesia. In some cases, the patient may have had a pre-existing sensitivity to chlorhexidine. This product may cause a severe allergic reaction. Symptoms may include wheezing/difficulty breathing, shock, facial swelling, hives, or rash. Use of ChloroPrep is contra-indicated where patients have shown previous hypersensitivity to chlorhexidine or isopropyl alcohol (see Section Contra-indications). If hypersensitivity or an allergic reaction occurs, stop use and seek medical help right away. **Per applicator costs** (ex VAT) ChloroPrep: 0.67ml (SEPP) - UK £0.30, Ireland €0.39; 1.5ml (FREPP) - UK £0.55, Ireland €0.64; 1.5ml – UK £0.78, Ireland €0.94; 3ml; 3ml – UK £0.85, Ireland €1.06; 10.5ml - UK £2.92, Ireland €3.79; 26ml - UK £6.50, Ireland €7.96. ChloroPrep with Tint: 3ml – UK £0.89, Ireland €1.09; 10.5ml – UK £3.07, Ireland €3.88; 26ml - UK £6.83, Ireland €8.19 **Legal category:** UK: GSL. Ireland: Not subject to medical prescription. **Marketing Authorisation Numbers:** ChloroPrep, (UK: PL05920/0002-001; Ireland: PA2287/001/002) & ChloroPrep with Tint, (UK: PL05920/0003-0001; Ireland: PA2287/001/001) **Marketing Authorisation Holder:** UK : Becton Dickinson UK Ltd, 1030 Eskdale Road, Womersley, Wokingham RG41 5TS, United Kingdom. Ireland : Becton Dickinson France, 11 Rue Aristide Bergès, 38800 Le Pont de Claix, France **Date of Revision:** May 2020.

Reporting suspected adverse reactions is important to monitor the benefit/risk balance of the medicinal product. Reporting forms and information can be found at www.mhra.gov.uk/yellowcard (for UK) and www.hpra.ie (for Ireland). Adverse events should also be reported to BD Freephone number: **For UK** 0800 0437 546 or email: CareFusionGB@professionalinformation.co.uk. **For Ireland:** +353 01 4287895/7896 or email: CareFusionIE@professionalinformation.co.uk

Injection - Syringes

Syringes - 2-Piece Technology

2-Piece Design

To ensure leak tightness, the syringe plunger has a larger diameter than the barrel. At the same time, the syringe barrel has to have thin wall technology to be flexible enough to accommodate the plunger movement. This requires precision molding of barrel and plunger. The resin formulation used for the barrel is self-lubricating so there is no need for additional lubrication with silicone oil.

Graduations

Scale markings typically in cubic centimetres (cc) or millilitre (ml) units. These units of measure are equivalent.

Barrel

Reservoir for holding liquid, clearly graduated to allow accurate and visual measurement of the syringe contents.

Flanges

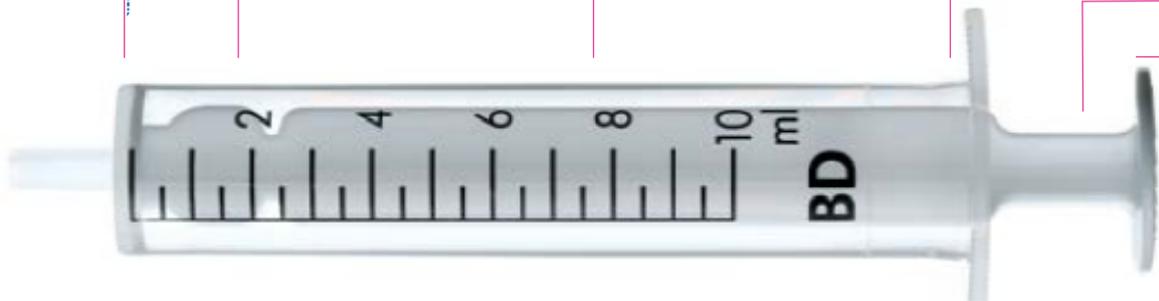

The “wings” that jut out from the side of the syringe barrel providing an area or surface for the index finger and middle finger to grasp during aspiration or administration.

Thumb Press

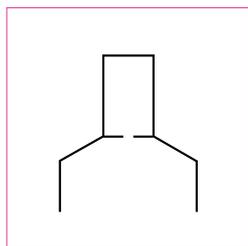

The clinician presses to push the plunger rod down into the barrel to expel its content

Plunger Rod

A piston-like device inside the barrel

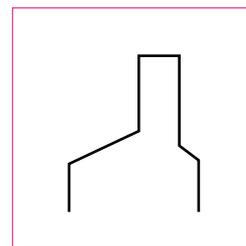

The anatomy of a 2-piece syringe (without stopper)

Concentric Luer Slip Tip:

A friction-fit connection that requires the clinician to insert the tip of the syringe into the needle hub or another attaching device in a push-and-twist manner. This will ensure a connection that is less likely to detach. Simply sliding the attaching device onto the syringe tip will not ensure a secure fitting.

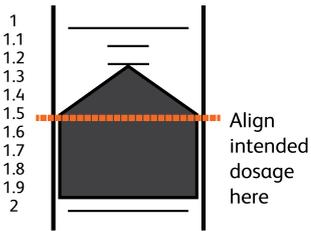

Eccentric Luer Slip Tip:

Allows for work requiring closer proximity to the skin. Generally used for venipunctures and aspiration of fluids. Also see luer slip instructions.

Syringes - 3-Piece Technology

Latex Free Stopper

Prevents leakage of medication around the plunger and acts as an indicator for measuring the syringe contents (see diagram).

Graduations

Scale markings typically in cubic centimetres (cc) or millilitre (ml) units. These units of measure are equivalent. On insulin syringes, however, graduations are displayed in “units” based on the insulin concentration prescribed. (Example: U-100 means 100 units of insulin suspended within 1 ml of fluid. A 3/10 ml insulin syringe will accommodate up to 30 units when using U-100 insulin).

Barrel

Reservoir for holding liquid, clearly graduated to allow accurate and visual measurement of the syringe contents.

Flanges

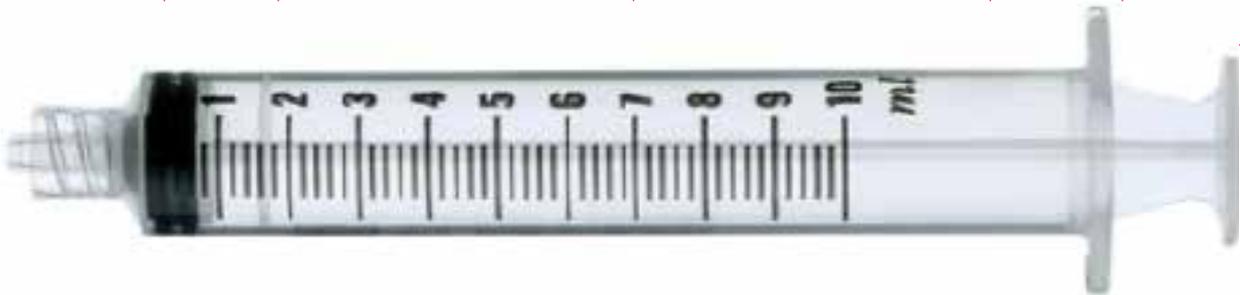

The “wings” that jut out from the side of the syringe barrel providing an area or surface for the index finger and middle finger to grasp during aspiration or administration.

Thumb Press

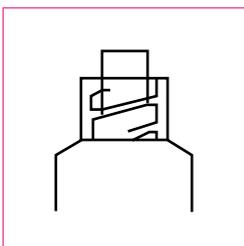

The clinician presses to push the plunger rod down into the barrel to expel its content

Plunger Rod

A piston-like device inside the barrel

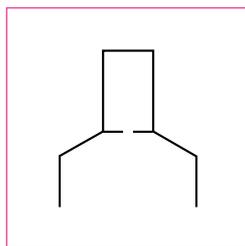

The anatomy of a 3-piece syringe (with stopper)

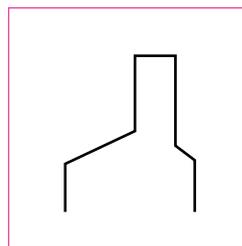

Luer Lock Tip:

Generally used for injections requiring a secure connection of the syringe to another device. The tip is threaded for a “locking” fit, and is compatible with a variety of needles, catheters and other devices.

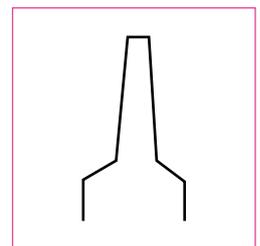

Concentric Luer Slip Tip:

A friction-fit connection that requires the clinician to insert the tip of the syringe into the needle hub or another attaching device in a push-and-twist manner. This will ensure a connection that is less likely to detach. Simply sliding the attaching device onto the syringe tip will not ensure a secure fitting.

Eccentric Luer Slip Tip:

Allows for work requiring closer proximity to the skin. Generally used for venipunctures and aspiration of fluids. Also see luer slip instructions.

Catheter Tip:

Used for flushing (cleaning) catheters, gastrostomy tubes and other devices. Insert catheter tip securely into catheter or gastrostomy tube. If leakage occurs, refer to your facility’s guidelines.

BD Discardit™ II - 2-Piece Syringe

- Transparent barrel for good visualization of syringe content
- Smooth plunger movement, reduced sliding force
- Leak-tight
- Accurate graduation suited to user's needs
- Retaining ring to prevent accidental plunger rod withdrawal
- Design of finger grip flanges ensures stability and comfort during injection
- Ergonomically designed plunger for single-handed operation
- Sterile, single-use
- Natural Rubber Latex is not part of the material formulation

BD Plastipak™ - 3-Piece Syringe

- Clear barrel for visualization of syringe content
- Bold scale printing to aid in setting for a more accurate dosage of medication
- Special silicone lubrication ensures that plunger moves smoothly and evenly
- Retaining ring to prevent accidental plunger rod withdrawal
- Leak-tight (locking facility on BD Luer-Lok™ syringes)
- BD Luer-Lok™ needle hub or extension line can be safely locked on the syringe
- Not autoclavable
- Sterile, single-use
- Natural Rubber Latex is not part of the material formulation

BD Emerald™, 3-Piece Syringe

- For general purpose use. Specialized design features benefit clinicians, patients and the environment
- Green stopper and bold scale markings to aid in setting an accurate dose
- Clear barrel to allow for a clear view of fluid
- Retaining ring to help prevent accidental plunger rod pullout
- Flange size and shape to provide stability and comfort during use
- Textured thumb press to reduce slippage during administration
- Minimizes waste disposal – has up to 30% less material than other syringes*
- Sterile, single use
- Natural Rubber Latex is not part of the material formulation

BD™ Convenience Pack

- Double bag ensures sterility of inner tray
- Tray cover does not produce visible fibers
- BD™ syringes in the tray are sterile
- Rigid tray - syringes stay together (opposite to bags)
- Same BD™ syringes as the one used in wards
- Sterile, single use
- Natural Rubber Latex is not part of the material formulation

BD™ Convenience Pack

Product Code	Description	Units Per Tray	Trays Per Box	NHS Supply Chain Code
302237	BD Plastipak™ 20 ml Luer-Lok™ Convenience Pack	25	4	-
302238	BD Plastipak™ 50 ml Luer-Lok™ Convenience Pack	10	4	-

BD™ Convenience Packs

Recent guidelines[†] have attributed to the pharmacist great responsibilities. Hazardous medicines should be prepared under appropriate conditions such as in centralized pharmacy and pharmacists must ensure that an appropriate quality system for compounded medicines is in place. In this changing environment technically savvy pharmacists seek to improve working practices. BD™ Convenience Pack could help.

BD™ Convenience Pack offers a tray containing multiple sterile, Luer-lock BD™ syringes, wrapped in a pouch that maintains tray surface sterile. The rigid tray keeps syringes together and no visible fibres are produced while opening it. By removing the need to disinfect and open many single-packaged syringe blisters, BD™ Convenience Pack helps facilitating the working process.

BD Microlance™ 3 Needles

- Easy penetration, smooth gliding force during insertion/ withdrawal and reduced catheter friction while sliding through tissue is a result of the following:
 - Three bevel precision grinding of needle bevel
 - Targeted needle surface polishing process
 - Proprietary needle lubrication process
- Thin walls permit the use of thinner needles with larger lumen thus increasing flow rates during injection and collection
- Recommended use: intradermal, subcutaneous, intramuscular, intravenous injections and aspiration
- BD Microlance™ needles can be connected to a Luer slip adapter or Luer-Lok™ connector
- Sterile, single use

Injection - Safety Systems

Needlestick injuries are an inherent risk of handling needles. They are very common among healthcare workers and can cause serious adverse effects, due to blood contact or injected agents. Whilst most needlestick injuries are minor, potentially serious and long-term complications can occur and have been reported.

No intervention can reduce needlestick injury risk to absolute zero but the use of safety devices can help reduce the risk of needlestick injury. To provide a comprehensive answer to healthcare workers' needs, and the safest possible working environment, BD supply an array of safety-engineered devices.

Nearly 25 years ago, BD pioneered safety injection with the introduction of the first safety syringe and is still committed to partnering with all healthcare organisations to protect healthcare workers from needlestick injuries and exposures to bloodborne pathogens.

BD safety engineered devices are not just additions or developments of existing products, they are the result of committed and continued investment in research, design and product development.

Our innovative technologies have been utilised across a broad range of products, resulting in:

- Complete and irreversible needle tip shielding
- Secure needle attachment
- Improved ergonomics for ease of handling in use.

Syringe-based safety devices

In syringe-based safety devices, the safety mechanism is built into the syringe.

The needle on a syringe-based safety device can be detachable or permanently attached. Typically, the needle is of a standard or conventional design.

Needle-based safety devices

In needle-based safety devices, the safety mechanism is built into the needle. The needle can be manually attached to a conventional syringe or a commercially prepared pre-filled syringe.

BD™ Blunt Fill and Blunt Filter Needles

- Fill needle with blunt tip
- 45° bevel avoids coring and designed to minimise the risk of needlestick injury
- Red hub and shield for easy identification as fill needle
- Also available with 5 micron filter for effective filtration of glass, metal, rubber and other contaminant particles
- Sterile, single use

BD Eclipse™ Safety Needle with SmartSlip™ Technology

- The SmartSlip™ Technology is specially designed for safe assembling of BD Eclipse™ needles to luer syringes
- Bevel oriented with safety cover to allow low angle injections
- No excess dead space - minimal medication waste
- When assembling BD Eclipse™ needles to a Luer slip syringe, an audible click indicates a safely assembled needle
- Safety activation immediately follows injection
- Wide, textured finger pad for thumb or forefinger
- Single-handed, one finger activation of the safety shield
- Sterile, single use

BD Integra™ Syringe with Detachable, Retracting Needle

- BD Integra™ Syringe with spring-based retracting needle combines innovative technology with BD quality and comfort.
- The unique non-luer thread design - BD Tru-Lok™ of the BD Integra™ detachable needle provides:
 - Secure connection
 - Significantly lower waste space volume as compared to a traditional Luer-Lok™ syringe and needle
 - Less waste space can reduce drug wastage
- Complete dosing ensured prior to activation
- BD Integra™ Blunt Needle allows change of needle for aspiration and administration
- No change in technique
- Safety activation immediately follows injection, needle is completely retracted into the syringe barrel and syringe and needle cannot be reused
- Sterile, single use

IV Catheters

Colour Coding and Corresponding Sizes of Cannula/Catheter

Gauge ³	Colour ^{1,2}	Outside diameter of Catheter in mm	Range of actual outside diameter in mm
26	Purple	0.6	0.550 to 0.649
24	Yellow	0.7	0.650 to 0.749
22	Blue	0.8; 0.9	0.750 to 0.949
20	Pink	1.0; 1.1	0.950 to 1.149
18	Green	1.2; 1.3	1.150 to 1.349
17	White	1.4; 1.5	1.350 to 1.549
16	Grey	1.6; 1.7; 1.8	1.550 to 1.849
14	Orange	1.9; 2.0; 2.1; 2.2	1.850 to 2.249
13	Red	2.3; 2.4; 2.5	2.250 to 2.549
12	Light Blue	2.6; 2.7; 2.8	2.550 to 2.849
10	Tan	3.3; 3.4	3.250 to 3.549

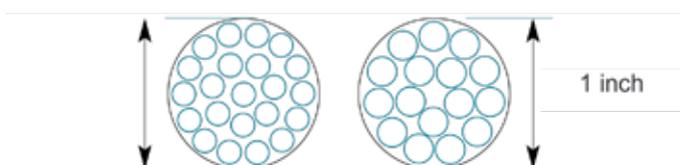

1) The Colour may be opaque or translucent

2) The Colour coding is usually applied to the catheter hub or to an integral fitting

3) The use of gauge numbers is optional

Cannulae/Catheter Conversions. Outer Diameters/ Gauge - French Sizes

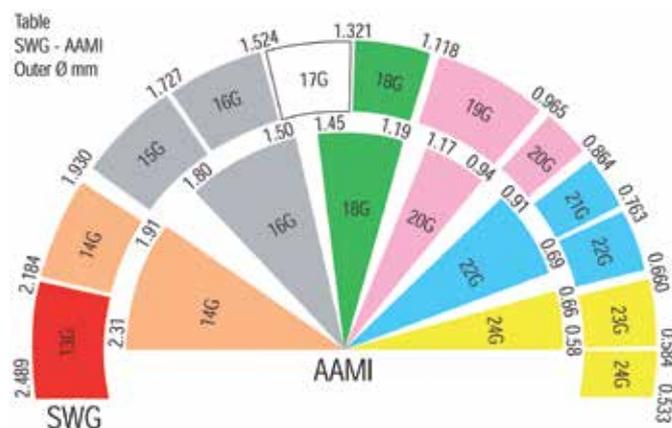

The definition of gauge measurement comes from the AAMI (Association for the Advancement of Medical Instrumentation - USA). This states how many cannula fit into a tube with an inner diameter of 1" (1 inch = 25.4mm).

The AAMI uses even numbers (18, 20, 22, etc.) as measuring units.

A similar measurement definition exists in UK and Ireland and this is known as the SWG (Standard Wire Gauge). The SWG uses consecutive numbers, i.e. 13 to 24, and is the common method of measurement for catheters in Europe.

The Charriere, commonly known as French, relates directly to the catheter size i.e. 1Ch = 0.33mm. In the following table the measurements of the AAMI - SWG - French are shown in relation to the outer \varnothing in mm.

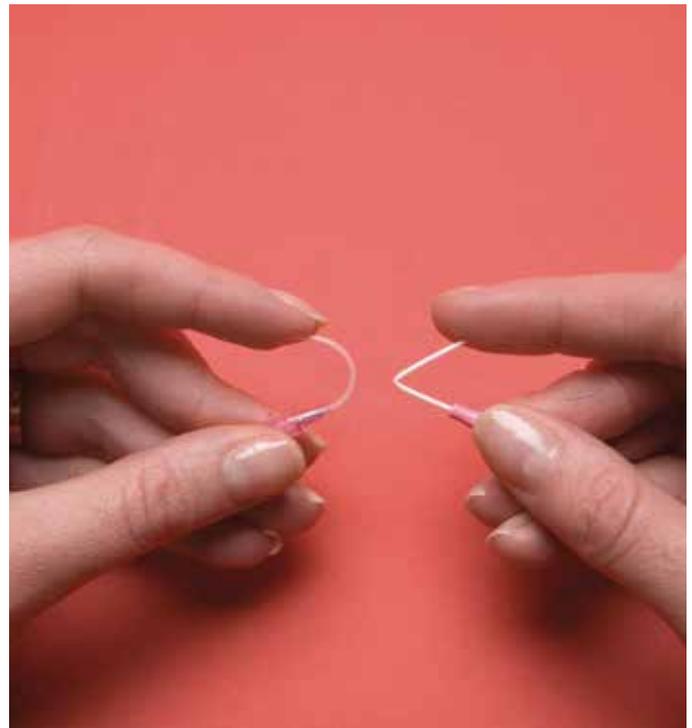

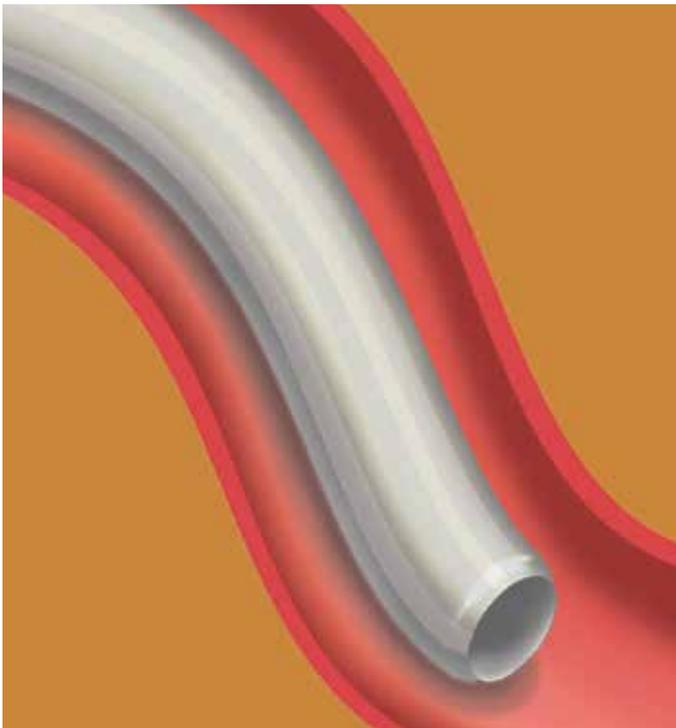

BD Vialon™ Biomaterial

- BD Vialon™ Biomaterial is a proprietary polyurethane, developed especially for vascular access.

BD Vialon™ is clinically proven to

- Increase the ease of penetration¹
- Reduce the risk of infiltration²
- Reduce the risk of phlebitis thereby reducing costs and increasing indwell times^{1,3,4,5}
- Exhibit greater kink resistance ensuring consistent flow rates^{1,3}

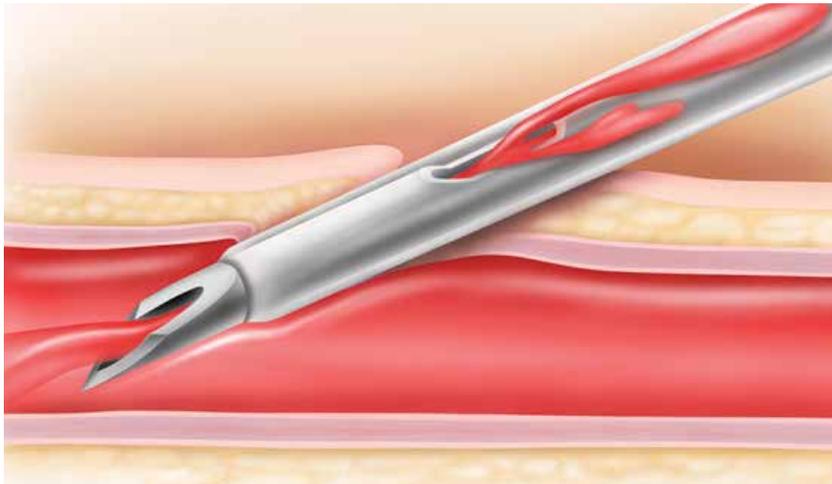

Products Manufactured with BD Vialon™

- BD Insyte™
- BD Insyte-N™ Autoguard™
- BD Insyte™ Autoguard™
- BD Insyte™ Autoguard™ BC
- BD Insyte-W™
- BD Insyte-N™
- BD Nexiva™
- BD Nexiva Diffusics™
- BD Saf-T-Intima™
- BD Venflon™ Pro
- BD Venflon™ Pro Safety

BD Instaflash™ Technology - Designed to Increase First-stick Success

- A successful first-stick is important for both the user and the patient, especially when accessing small and compromised veins
- BD Instaflash™ Needle Technology is designed to reduce hit-and-miss insertion by immediately confirming vessel entry through a unique notch in the needle shaft

Products Manufactured with BD Instaflash™

- BD Insyte™
- BD Insyte-N™
- BD Insyte™ Autoguard™

- BD Venflon™ Pro Safety
- BD Cathena™
- BD Neoflon™ Pro Safety

Please note that any product/Stock Keeping Unit (SKU) without an NHS Supply Chain ordering code, may not be commercially available in the UK.

BD Venflon™ Peripheral Ported IV Catheter

- Permits needle-free administration of bolus medications during infusion
- Back-cut needle bevel and tapered end of the PTFE (Polytetrafluoroethylene) catheter allow easier insertion and minimise the risks of vein damage
- The improved design of the injection port cap ensures easy opening and secure closing, whilst avoiding touch contamination of the injection port and valve
- Flexible wings stabilise the catheter in the vein and provide comfortable securement for the patient
- Grip is ergonomically designed to allow for a variety of user techniques and to aid insertion
- BD Luer-Lok™ compatible
- Sterile, single use

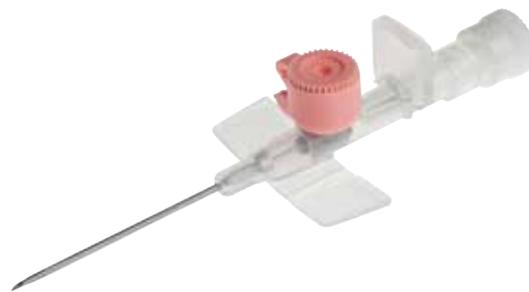

BD Venflon™ Peripheral Ported IV Catheter

Product Code	Gauge	Catheter length (mm)	Flow rate (ml/ min)	Colour code	Units/ Box	NHS Supply Chain Code

BD Venflon™ Pro IV Catheter

- Familiar ported design with ‘snap-cap’ aids non-touch technique, which helps prevent port being inadvertently left open
- Improved flow rate when compared with FEP (Fluorinated ethylene propylene) polymer catheters, as BD Venflon™ allows for a larger internal diameter
- Flexible wings stabilize the catheter in the vein and provide comfortable securement
- BD Luer-Lok™ compatible
- Includes all the benefits of BD Vialon™
- Sterile, single use

BD Cathena™ Non-ported IV Catheter

- Features blood control BD Multiguard™ technology, which is designed to stop the flow of blood from the catheter hub until a Luer connection is made.
 - › Multiguard™ provides reduction of accidental blood exposure for patients and healthcare worker
- Incorporate a triple flash confirmation system for a visual confirmation of vessel entry improving first stick success
 - › BD Instaflash™ Needle Technology allowing for immediate visualization of blood along the catheter
 - › A secondary confirmation into the flash chamber confirming that the catheter is in the vessel
 - › A third flashback occurs when blood flows into the coloured catheter hub giving further confirmation that the catheter is still in the vein lumen after needle removal
- The needle tip is fully encapsulated when the needle is removed, reducing the risk of accidental needlestick injury
- Available with and without wings
- Suitable for a variety of insertion technique
- MRI Conditional
- Sterile, single use

BD Saf-T-Intima™ Integrated Safety IV Catheter System

- Needle protection device that withdraws the needle into a safety barrel, as soon as the needle is removed, to minimise the risk of accidental needlestick injuries
- Luer lok compatible
- The 22g and 24g are approved for subcutaneous infusion therapy
- BD Saf-T-Intima™ is available in straight or Y adaptor for continuous or bolus infusion requirements
- Includes all the benefits of BD Vialon™
- Sterile, single use

BD Saf-T-Intima™ with Y-Adapter

BD Nexiva™ Closed IV Catheter System

- BD Nexiva™ Closed IV Catheter System is a pre-assembled configuration which combines separate IV components into a single integrated peripheral catheter
- Can be used with power injectors up to a maximum pressure of 300 psi
- The built-in stabilisation platform is soft and flexible, and is designed to help minimise catheter movement in the vessel which may increase catheter dwell time
- BD Q-Syte™ luer access split septum* needle-free connector
- Includes all the benefits of BD Vialon™ and BD Instaflash™ Technology
- Sterile, single use

BD Nexiva™ - Closed IV Catheter System - Dual Port (Y connector with 2 Q-Syte)

BD Nexiva Diffusics™ Closed IV Catheter System

- Designed for radiographic power injection
- This all-in-one BD IV access system includes the IV catheter, extension set and stabilisation platform
- Pre-assembled closed IV catheter system designed to help minimise blood exposure, improve catheter stabilisation, enhance insertion success with BD Instaflash™ needle technology
- Specifically designed for use in radiology: engineered to deliver power injection and infusion therapy needs, allowing clinicians easy IV access and delivery of the desired injection protocol flow rates in diagnostic imaging
- Three lasercut teardrop shaped holes are located in the catheter tip to maximise the diffusion of contrast into the vein. The BD Diffuser tip acts to reduce the intensity of flow exiting the catheter tip, which may decrease stress on the vein wall
- Compatible with Power Injectors 325 psi setting and can meet high flow rate injection protocols
- Includes all the benefits of BD Vialon™ and BD Instaflash™ Technology
- Sterile, single use

BD Angiocath™ Peripheral IV Catheter

- Made of radiopaque FEP polymer
- Thermo-moulded bevel ensures excellent penetration properties
- Recommended for infusion, transfusion, angiography
- Triple-bevel needle
- Transparent clear flashback chamber
- Available in longer lengths (14 G and 16 G available with 83 mm and 133 mm long catheters)
- Diameters 12 G and 10 G permit very large volume emergency infusions
- BD Luer-Lok™ compatible
- Sterile, single use

BD Insyte-N™ Peripheral IV Catheters

- Dedicated to small veins
- 14mm long needle, one of the shortest on the market, to accommodate small veins and provide a greater choice of insertion sites
- Recommended for fragile veins and low venous pressure
- BD Luer-Lok™ compatible
- Includes all the benefits of BD Vialon™ and BD Instaflash™ Technology
- Sterile, single use

BD Neoflon™ Peripheral IV Catheter

- For the puncture of small fragile vessels - dedicated to small veins
- 24 G and 26 G PTFE catheter for the puncture of small fragile vessels
- Unique design of the detachable wing holder makes the catheter easier to hold, using either a ported or non-porting grip
- Flexible wings facilitate secure fixation, without the need to immobilise the limb
- Sterile, single use

BD Neoflon™ Peripheral IV Catheter

Product Code	Gauge	Catheter length (mm)	Flow Rate (ml/min)	Colour code	Units/ Box	NHS Supply Chain Code
391350	24 G	19	13	Yellow	50	FSP070

BD Neoflon™ Pro Safety Paediatric IV Catheter

- Dedicated safety paediatric IV catheter designed to access small and fragile veins
- Incorporates a triple flash confirmation system for a visual confirmation of small vessel entry to help improve first stick success
 - BD Instaflash™ Needle Technology allowing for immediate visualization of blood along the catheter
 - A secondary confirmation into the flash chamber confirming that the catheter is in the vessel
 - A third flashback occurs when blood flows into the coloured catheter hub giving further confirmation that the catheter is still in the vein lumen after removal
- The needle tip is fully protected when the needle is removed, reducing the risk of accidental needlestick injury
- Includes all the benefits of BD Vialon™ engineered to reduce the risk of mechanical phlebitis
- Low profile offering an optimized catheter securement

Arterial Catheters

BD Insyte-A™ Arterial Catheter

- Depressing the plunger minimises back flow of blood, reducing the risk of blood exposure
- Guidewire is in line with the needle tip when the plunger head is in line with the marker on the barrel
- The large transparent flashback chamber enables confirmation of vessel puncture
- Round tipped guidewire aids smooth securing of the blood vessel
- Includes all the benefits of BD Instaflash™ Technology
- Sterile, single use

Product Code	Gauge	Catheter length (mm)	Colour code	Units/ Box	NHS Supply Chain Code
382802	22 G	38	Blue	20	-
382805	20 G	38	Pink	20	-

BD™ Arterial Cannula with BD Floswitch™ One-Way Stopcock

- Catheter designed for insertion into peripheral arteries, for the determination of blood gas estimations or monitoring blood pressure
- BD Venflon™ - comparable insertion characteristics
- Wings to facilitate fixation
- The BD Floswitch™ On/Off device prevents back-flow and reduces the risk of air embolism and exposure to blood
- Sterile, single use

Product Code	Gauge	Catheter length (mm)	Colour code	Units/ Box	NHS Supply Chain Code
682245	20 G	45	Red	25	FSP857

BD™ Arterial Needle for Seldinger Technique

- Two-part arterial needle, specifically designed for the Seldinger Technique
- Solid inner needle
 - Precisely ground, extremely sharp, short bevel arterial point assures percutaneous entry with minimal trauma and vessel roll
 - Solid design eliminates coring
- Outer thin-wall needle
 - Close fitting taper provides smooth entry with minimal trauma
 - Tapered, square-cut distal end of outer cannula facilitates smooth passage of guidewire through needle
 - Lightweight polypropylene BD Luer-Lok™ hub provides excellent instrument balance
 - Winged handle provides positive control
 - Manufactured to exacting tolerances to accept guide wire with minimum blood leakage and associated clotting
 - Funnel-shaped interior of outer needle hub facilitates insertion of guidewire
- For 0.032 - 0.038 inch guidewire
- Sterile, single use

Product Code	Gauge	Catheter length (mm)	Colour code	Units/ Box	NHS Supply Chain Code
408273	18 G	73	Pink	10	-

BD™ Single Wall Puncture Multi Purpose (M/P) Procedure Needle

- Multipurpose needle for traditional or digital angiography
- Winged design provides positive control for arterial or venous punctures
- Funnel shaped hub facilitates insertion of guidewire
- Lightweight plastic BD Luer-Lok™ hub provides excellent, “feel” and balance
- Thin-wall needle for maximum internal diameter, minimum outer diameter sharp bevel for easy vessel entry
- One part needle with wings
- For 0.032 - 0.038 inch guidewire
- Sterile, single use

Product Code	Gauge	Catheter length (mm)	Colour code	Units/ Box	NHS Supply Chain Code
408295	18 G	70	Pink	10	-

Primary and Secondary Sets

ARD Sets

- Gravity Sets with an Anti-Run Dry technology and Auto Prime
- Improve quality care and workflow efficiencies
- These sets are equipped with :
 - Vented drip chamber
 - Drip chamber with an ARD membrane
 - Priming cap/Auto Prime
 - Pinch clamp
- DEHP or Natural Rubber Latex are not part of the material formulation

PVC Sets

Product Code	Length (cm)	Luer lock	Drops / ml	SmartSite™ Y port	Stopcock	In-line filter	Back check valve	Flow controller	Tubing material	Units/ Box	NHS Supply Chain Code
388000	185	Fix	20						PVC	100	-
388002	185	Fix	20	✓					PVC	100	-
388050	185	Fix	20				✓		PVC	100	-
388136	190	Rotating	20		✓				PVC	80	-

Needle-free IV Sets

- Gravity Sets with a needle-free Y-port
- These sets are equipped with:
 - Vented spike (except 70002B-06)
 - Drip chamber with a 15 µm filter
 - 20 drops per ml
 - Needle-free Y-port (except Product Code 70002B-06 that has a SmartSite™ attached in the drip chamber)
- DEHP or Natural Rubber Latex are not part of the material formulation

VH-55	200	Fix		✓				✓	PVC	100	-

Secondary Sets

- Secondary lines to attach to primary sets with upper ports
- These sets are equipped with:
 - Vented spike
 - 20 drop per ml
- DEHP or Natural Rubber Latex are not part of the material formulation (except 72213N-0006 that contains DEHP)

With Hanger

Product Code	Length (cm)	Luer lock	Filter drip chamber	Drops/ ml	Roller clamp	Pinch	Hanger	Tubing material	Units/ Box	NHS Supply Chain Code
72213N-0006	75	Fix	No filter	20	✓		✓	PVC with DEHP	100	-

Burette Sets

- Gravity burette sets for preparations in the ward
- Burette add-on to attach any administration set (82213E-0006)
- These burettes are equipped with:
 - Vented spike
 - 60 drops per ml (except 82113E-0006 that depends to the attached set)
 - Capacity of the burette from 100 to 150 ml
- DEHP or Natural Rubber Latex are not part of the material formulation

Add-on Burette Set

Product Code	Length (cm)	Luer lock	Burette Chamber	Needle Y-Port	Priming cap	Tubing material	Units/ Box	NHS Supply Chain Code
82113E-0006	50		SmartSite™ inlet			PVC	20	-

Standard Burette Set

BW-120-3VG	120	Rotating	✓				PVC	100	-

In-line Filters

- Filters stand-alone and with extension set different micron sizes (from 0,2 to 5 micron)
- For neonatal, paediatrics and adult infusion. Available 0,2 micron positively charged to filter endotoxins
- Hydrophilic in-line filters low protein binding made of PES (Polyethersulfone), except MFX1725 and MFX1642 of 5 micron
- DEHP or Natural Rubber Latex are not part of the material formulation

Product Code	Length (cm)	Luer lock	Filter size	Maximum use	Membrane material	Priming cap	Side clamp	Needle Y-port	Tubing material	Units/Box	NHS Supply Chain Code
Stand-alone filters - Filter dimension 34 x 56 mm with effective filtration area of 4,5 cm ³

Needle-free Connectors

All valves are available in a wide variety of configurations

Needle-free Connectors

Making an informed, educated decision

Not all healthcare professionals have the same clinical requirements when it comes to needle-free connectors. BD offers a comprehensive range of different proven technologies and enables you to make an informed decision, so that you can choose the right connector for your specific needs.

BD Q-Syte™

- Simple internal design, with clear housing for effective flushing
- Straight, open fluid path provides a high-flow rate¹
- Split septum design
- Sterile, single use

Product Code	Description	Units/ Box	NHS Supply Chain Code
385100 [†]	Stand alone needle-free connector	50	FSC045
385102	Extension Set, 15 cm (6 in.), Small bore, fixed nut	25	FSC055
385163	Specialty Extension Set, 15 cm (6 in.), Small bore bi-extension set, spin nut	50	FSW333
385164	Specialty Extension Set, 15 cm (6 in.), Small bore tri-extension set, spin nut	50	-
385102	Q-Syte Extension Set Micro 6in	50	FSC055

[†] Product also available in bulk non sterile.

SmartSite™

- Smooth easy-to-scrub surface for ease of disinfection
- Split septum design with a straight fluid pathway
- An efficient, leak-free system for chemotherapy when used in combination with Texium™ devices²
- Available in a wide variety of configurations
- Sterile, single use

Product Code	Description	Units/ Box	NHS Supply Chain Code
2000E7D	Stand alone needle-free connector	100	FSW165
20039E7D	Extension set, 15 cm	100	FSB024

MaxZero™

- Solid, sealed access, easy-to-scrub surface
- Positive displacement action - zero reflux upon disconnection helps prevent catheter occlusions^{3,4}
- Proven technology that has shown superior results in preventing the risk of infection⁵
- Compact, lightweight design makes it easy to handle for neonate and paediatric use
- Sterile, single use

MaxZero™

Product Code	Description	Units/ Box	NHS Supply Chain Code
MZ1000†	Stand-alone needle-free connector	100	FKA585
MZ5307	2 way extension line, 18 cm	50	FKA577

MZ9266	3 way extension line, microbore Trifuse 0.6 ml	50	FSB2049

† Product also available in bulk non sterile.

NeutraClear™

- Compact, transparent connector with easy-to-scrub surface
- Neutral displacement
- Guiding seal ring helps maintain the integrity of the silicone and provides a better sealing of the split septum after multiple activations
- Internal blunt cannula design minimises contact between the external surface and the internal fluid path on luer activation
- Sterile, single use

Disinfecting Caps

BD PureHub™ Disinfecting Cap

BD PureHub™ is a Disinfecting Cap designed to act a physical barrier to be used on the end of Needle-free Connectors

- Rapid disinfection in just 1 minute
- Disinfects with a sterilised 70% isopropyl alcohol solution
- Maintains a physical barrier against contamination for up to 7 days
- Provides visual confirmation of compliance with disinfection protocol
- Large width and finger grips for ease of application and removal
- Easy to apply with uniquely designed luer threads
- Shown to be compatible with needle-free luer connectors

Product Code	Description	Units/ Box	NHS Supply Chain Code

Pre-filled Flushing Syringe for Vascular Access

BD PosiFlush™ Pre-filled Flushing Syringes [NaCl 0,9 %]

- Ready-to-use, sterile pre-filled flushing devices containing sodium chloride (isotonic NaCl 0,9 %)
- BD PosiFlush™ syringes are designed to eliminate syringe-induced blood reflux enhancing catheter maintenance protocols
- Special design of syringe barrel with the 3 ml and 5 ml syringes having the same barrel diameter as the 10 ml syringe in order to ensure a standardised pressure during the flushing process
- BD Luer-Lok™ tip for secure connection to the catheter
- Size and shape of the tip cap allow easy handling, and help avoid touch contamination of the syringe luer connection
- Eliminates the use of needles
- Terminally steam sterilised - sterility assurance level of 10^{-6}
- Class III

BD PosiFlush™ SP - Sterile Fluid Path Way, for General IV Flush Procedures

Anaesthesia Systems

BD Whitacre™ Pencil-Point Spinal Needle

- BD Whitacre™ Needles are manufactured with proprietary needle tipping, side-port and unique low-glare hub technologies
- Tip designed to spread the dural fibres and help reduce the occurrence of post dural puncture headache
- The thin-wall design is intended for improved visualisation of cerebrospinal fluid
- Distinct “pop” as the pencil point penetrates the dura
- Pencil point design intended to provide better “tip strength” to minimise bending or breakage
- Precision-formed side hole allows and facilitates directional flow of anaesthetic agents
- Translucent hub for ease of cerebrospinal fluid visualisation
- Sterile, single use

BD Whitacre™ Pencil Point Spinal Needle

Product Code	Gauge	Length (mm)	Length (inch)	Colour code	Units/ Box	NHS Supply Chain Code
402051	27 G	90	3 1/2"	Grey	25	-
409443	27 G	119	4 11/16"	Grey	-	FTR429

Hazardous Drugs Safety Systems

BD PhaSeal™

- Clinically proven* closed-system drug transfer device (CSTD)
- Protection for staff when hazardous drugs are involved to avoid potential health risk with limited or infrequent exposure
- Easy to learn and easy to use
- System is based on three primary components: Protector, Injector and Connector. They come in a range of sizes to meet the specific requirements and preferences
- BD PhaSeal™ is designed with dry, leakproof connections – preventing exposure when connecting and disconnecting from vials, syringes, IV bags and patient IV lines
- The sealed airtight chamber of the Protector captures aerosols and vapours while maintaining equal pressure in the vial during drug preparation
- The Injector ensures sealed drug transfer and “locks” into safe mode when the procedure is complete to prevent any risk of exposure

BD PhaSeal™ Protector - Drug Vial Access Device

Product Code	Description	For drug vials with neck diameter of (mm)	Pressure equalisation/ volume (ml)	Colour code	Units/ Box	NHS Supply Chain Code

BD PhaSeal™ Optima

BD PhaSeal™ Optima system is uniquely designed with no inlets or air exchange for airtight drug transfers. It also incorporates the double membranes and vapour capture mechanisms pioneered by the BD PhaSeal™ system, which has been demonstrated to reduce the risk of hazardous drug exposure vs. traditional practices.

BD PhaSeal™ Optima Protector

Texium™

- The Texium™ closed male luer is designed to promote safe handling of fluids and medications, particularly hazardous or cytotoxic drugs
- The Texium™ Needle-free Syringe comprises of a Texium™ closed male luer (cml) that is permanently attached to a Luer-Lok™ syringe and will allow various potentially hazardous fluids, such as those found in oncology units or during blood withdrawal, to be used safely (during mixing, preparing and administration) without fear of exposure
- Texium™ can be connected to any ISO-compliant female luer
- A closed system can only be maintained when the Texium™ Needle-free Syringe is used with a Smartsite™ Needle-free Connector
